PIPE LINING SOLUTIONS

## CALIBRATION UNIT MINI

FOR PRECISE CALIBRATION OF RESIN IMPREGNATED LINERS

### PRECISION FOR THE PROS.

The Armor® Calibration Unit Mini up to 12" is a comfortable, user-friendly solution in a new design. The compact version impresses with its low weight, sophisticated design and electronic calibration.

The roller spacing, which determines the wall thickness as a result of the rehabilitation, can be defined on the top of the unit by a handle. The pull-through speed is defined and controlled electronically via a rotary control. Rubber feet on the underside always ensure optimum support for the unit. **The mini impregnation system can calibrate up to 12" and is still compact and lightweight.**

KEY FEATURES	
ELECTRONICS INTEGRATED	
EMERGENCY STOP	
LENGTH MEASURING UNIT	
PEDAL CONTROL	

ARMOR® CALIBRATION UNIT - MICRO	
PART NUMBER	DESCRIPTION
S1E-WO-MINI	Calibration Unit Mini - Electric

PRODUCT SPECIFICATIONS	
WEIGHT	66 lbs
SIZE (W x L x H)	12" x 29" x 14"
LINER DIMENSIONS	12"
ROLLER TABLE	No
VERSION	Mobile Version
PROTECTIVE COVER	No
ROLLER DRIVE	Electric
HEIGHT ADJUSTMENT	Manually with handle

### FREE IN-HOUSE DEMO WITH PURCHASE

*Designed for individuals that have limited or no lateral lining experience.*

1 day In-House classroom training and demonstration of equipment and materials. Source One Environmental will provide all consumables and equipment for demonstration (along with meals). Accommodations (travel fees, lodging, etc.) will be responsibility of the customer.
